## DETAILED ACTION

### *Allowable Subject Matter*

1. Claims 18-20 allowed.
2. Claims 6-13, 21 and 22 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

### *Claim Rejections - 35 USC § 103*

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

4. Claims 1-5, 14 and 15 rejected under 35 U.S.C. 103(a) as being unpatentable over Komoto et al. (6,661,030) in view of Comanzo (6,409,938)

Regarding Claims 1-5, 14 and 15, Komoto et al. disclose a semiconductor light emitting device including fluorescent material where in Fig. 16 it is disclosed a light emitting device 990 disposed on a supporting body 110 and a coating layer FL comprising a fluorescent substance and covering at least a surface of the light emitting device where the fluorescent substance absorbs at least a portion of light portion of the light emitted by the light emitting device and emits light of different wavelength. Komoto et al. fail to disclose the make-up of the fluorescent material. However, Comanzo discloses aluminum fluoride flux synthesis method for producing

cerium doped YAG where in claims 1, 10-16 , 30, 42 and 43 the required makeup of the fluorescent coating material is disclosed.

It would have been obvious to one of having ordinary skill in the art at the time the invention was made to include the required makeup of the fluorescent coating material in Komoto et al. as taught by Comanzo in order to have a light emitting device with increased performance.
